Exception Handling Assignments

SI	Assmt ID DotNet\Obj11	Assignment
1	A	Write a program that collects information of employees in an organization. When the user gives the input make sure that employee's age should be between 18 and 60. If otherwise, throw exception
2	B	Write a program that throws Arithmetic Exception and handle the exception properly
3	C	Create an array having 10 elements. Try to print the element in the 11th position. Catch the appropriate exception.
4	D	Write a method that will return a random number. If the random number happens to be a prime no, throw an exception. Call this method in a program that you create and handle the exception accordingly. (use Math.random() method to get random number).
